

# Installation Instructions•••

Follow the simple instructions below to install the Eliminator series microphone.

1. Remove the microphone cap (unscrew) from the handset.
2. Remove the existing microphone from the handset. Be sure to leave the microphone cup (with contacts) in the handset.
3. Install the Eliminator microphone by screwing it onto the handset in place of the original microphone cap. Note: It may be necessary to bend the two contacts in the microphone cup up slightly, to assure good contact with the microphone contact surfaces.
4. When installing the microphone, the sound ports (located on the edge of the microphone cap) must be aligned with the cord set. See Figure 1.
5. With the microphone screwed into place, and the sound ports located as described above, tighten the set screw to hold the microphone in position. Note: Do not over tighten the set screw.
6. The handset is now ready for use.
